DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, 6-10 are drawn to a method of generating an immune response to PSA by introducing a pox viral vector containing DNA encoding PSA linked to a promoter; contacting host with additional PSA or cytotoxic T-cell eliciting epitope; contacting host with an additional pox virus vector containing DNA encoding PSA linked to a promoter, using pox viruses of the suipox, avipox, capripox, and orthopox groups; and eliciting an immune response using PSA or T-cell eliciting epitope formulated with a either an adjuvant or liposomal formulation classified in class 514, subclass 44.
 - II. Claims 4-10, are drawn to a method of generating an immune response to PSA in a host by contacting host with PSA or a cytoptoic T-cell eliciting epitope followed by contacting with additional PSA encoded by a pox virus vector; using pox viruses of the suipox, avipox, capripox, and orthopox groups, and eliciting an immune response using PSA or T-cell eliciting epitope formulated with a either an adjuvant or liposomal formulation classified in class 514, subclass 44.

Application/Control Number: 09/693,121 Page 3 Art Unit: 1642

111. Claim 13, is drawn to a method of generating an immune response to PSA by contacting host with cytotoxic T-cell eliciting epitope of PSA, classified in class 424, subclass 198.1.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions relate as methods of generating an immune response to PSA (Prostate Specific Antigen), but differ as to the steps and means of generating the response. Groups I entails the introduction of: a pox viral vectors that encode PSA; the addition of PSA or a cytotoxic T-cell eliciting epitope; followed by the addition of another pox viral vector encoding PSA. Group II entails the introduction of: PSA or cytotoxic T-cell eliciting epitope; addition of PSA or a cytotoxic T-cell eliciting epitope; followed by a pox viral vector encoding PSA. Group III entails contacting the host with cytotoxic T-cell eliciting epitope. All these methods are different with respect to modes of operation.
- 3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or III, restriction for examination purposes as indicated is proper.
- Claims 6-10 and 12 are generic to a plurality of disclosed patentably distinct 4. species comprising suipox, avipox (fowlpox, canary pox, pigeon pox), capripox, orthopox, and adjuvants (RIBI Detox, QS21, incomplete Freund's). Because these

Application/Control Number: 09/693,121

Art Unit: 1642

species are capable of being combined in a multitude of combinations, a single species must be elected from the pox viruses, namely suipox, avipox, capripox, orthopox, and adjuvants. If avipox is elected, applicant must elect one of fowlpox, canary pox, or pigeon pox. In regards to adjuvants, a single species must be elected from RIBI Detox, QS21 or incomplete Freund's adjuvants. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

- 5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 1642

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher H Yaen whose telephone number is 703-305-3586. The examiner can normally be reached on Monday-Friday 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anthony Caputa can be reached on 703-308-3995. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-4242 for regular communications and 703-305-3014 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0196.
